

High yield alternative investment strategy

Investors seeking higher returns are shifting from conventional to alternative investments; riskier because of longer investment periods and lack of liquidity. Safe haven investments preferred during market turbulence are low yielding. Gold, also a safe haven asset due to value appreciation in adverse conditions, despite an unstable negative correlation with equities, with its volatility allows for possible higher risk-adjusted returns.

Pinnacle Liquid Enhanced Returns Commodities Strategy 50 ("PIERCE 50") is Coinful Capital Fund's solution to give investors exposure to relatively liquid higher yielding alternative investments, with gold as an underlying safe haven asset, with mitigated price volatility.

PIERCE 50 takes advantage of a direct relationship with a refinery and the market circumstances in South Africa to eliminate the layers of intermediaries with a proprietary well-funded supply network throughout the country to buy gold from small producers at deep discounts and sell internationally at spot prices. At all times PIERCE 50 is either holding cash or physical gold, qualifying the strategy as a safe haven alternative investment, allowing it also to liquidate positions easily giving it increased liquidity. The ability to buy at deep discounts eliminates the volatility of gold related instruments and also because of those deep discounts a high-yield return is achieved.

The PIERCE 50 opportunity: South Africa & Sub-Saharan Africa

The gold mining sector in South Africa with the second largest reserves in the world is dominated by a few large mining companies which mine only large-scale deposits and many small and medium sized miners that mine many small and scatter deposits all over the country. The few licensed refineries are the only ones allowed to export gold, impose minimum supply commitments which can only be met by the large miners. Smaller producers have no choice but to sell to intermediaries at deep discounts that in turn re-sell to aggregate volumes to sell to the refineries. These intermediaries are not well funded leaving producers with unsold gold.

Terms	
Base Currency	USD
Acceptable Currencies	USD, USDT, USDC. <small>Investments in any other currency than Base Currency will be converted at spot rate on date of funds received</small>
Minimum Investment	US\$ 100,000
